This is an example of EVENT CONTROL

Bare bone template:

```
Hello.html    *Helloworld.html

    <html>
  <html>
      <head>
          <script
              src="https://cdnjs.cloudflare.com/ajax/libs/angular.js/1.7.8/angular.min.js"></script>
      </head>

      <body>
      <!--  type in name, click button, 'Hello, Name' appears in div -->
          <input type="text" /> <button>Click</button>
          <div></div>
      </body>

      <script type="text/javascript">

      </script>
  </html>
    |
```
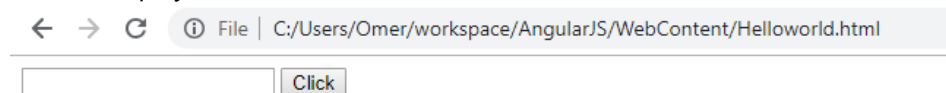

...which displays:

```
←  →  C    ⓘ File | C:/Users/Omer/workspace/AngularJS/WebContent/Helloworld.html
```

[   ] Click

... and now after typing in this code:

```
<html ng-app="hello">
    <head>
        <script
            src="https://cdnjs.cloudflare.com/ajax/libs/angular.js/1.7.8/angular.min.js"></script>
    </head>

    <body ng-controller="helloCtrl">
    <!--  type in name, click button, 'Hello, Name' appears in div -->
        <input type="text" /> <button ng-click="click()">Click</button>
        <div></div>
    </body>

    <script type="text/javascript">
        angular.module("hello", []);
        // dependency example
        //angluar.module("hello", ["ngRoute"]);

        //no 'var app =' stuff
        angular.module("hello").controller("helloCtrl", function($scope){
            $scope.click = function(){
                window.alert('Yaas');
            };
        });
    </script>
</html>
```

...this will allow us to click on that same button and get an alert box:

File | C:/Users/Omer/workspace/AngularJS/WebContent/Helloworld.html

Click

This page says

Yaas

OK

Click

This page says

Yaas
